Body Systems Presentation

A. Choose a format for your presentation: Poster, sculpture, skit, pamphlet/brochure, Powerpoint presentation

B. Structure for you Presentation:

1. After your presentation we should know the following about the body system you are presenting:
   a. The main functions of the system
   b. The main organs of the system
   c. The structure (how it’s made) and function (what it does) of each of the organs
   d. How the organs work together within the system
   e. How this system works with at least one other body system
   f. 3-5 interesting facts about the system

2. Standards for presentation itself
   a. The presentation should last 5-7 minutes.
   b. Everyone in your group should take part.
   c. You must have a script written on cue cards (index cards will work well).
   d. Use the powerpoint slides as a guide and an attention getter for the audience – write most of what you are going to say on index cards.
   e. Speak loudly, clearly, and directly to your audience (don’t mumble and stare down at your index cards).
   f. Be prepared to answer questions from your audience after the presentation.

3. Research: use the following to conduct research
   a. internet sites provided on portaportal
   b. your science text
   c. other materials provided by the teacher
   d. library materials, articles, etc.
   e. Site your sources. The last page of your presentation should be a list of the websites, text books, and other published sources you used to obtain information for your presentation.
   f. IMPORTANT: do not spend too much time searching for pictures for your presentation. I want you to spend the majority of your time investigating how your system works. Don’t let me catch you wasting time. You will be held accountable for knowing how your system is structured and how it functions!!!
